

Did you know...

Our feet, shock absorbers always under pressure !

Indeed, they make an average of 10,000 steps per day, and for 90% of the population in the wrong position.

Standing and walking on unbalanced foundations favor asymmetric tensions in the foot muscles and cause on the long term disturbances of body posture upwards.

HIGH TECH

The intelligent insole is the result of a totally new vision of our researchers and we guarantee an unparalleled production quality, as we use the latest generation of materials, which are also used in the aerospace industry.

Furthermore, this insole is equipped with a particularly active ventilation system. A plurality of holes enables the further transport of the moisture in the spongy tissue at the underside of the insole. The foot remains completely dry with a maximum comfort.

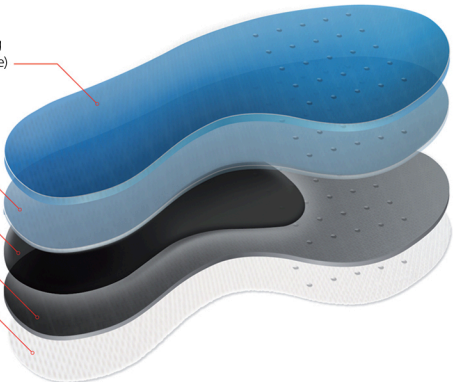

1. "Nubuck PU" covering (desiccant and washable)

2. Shock-absorbing material

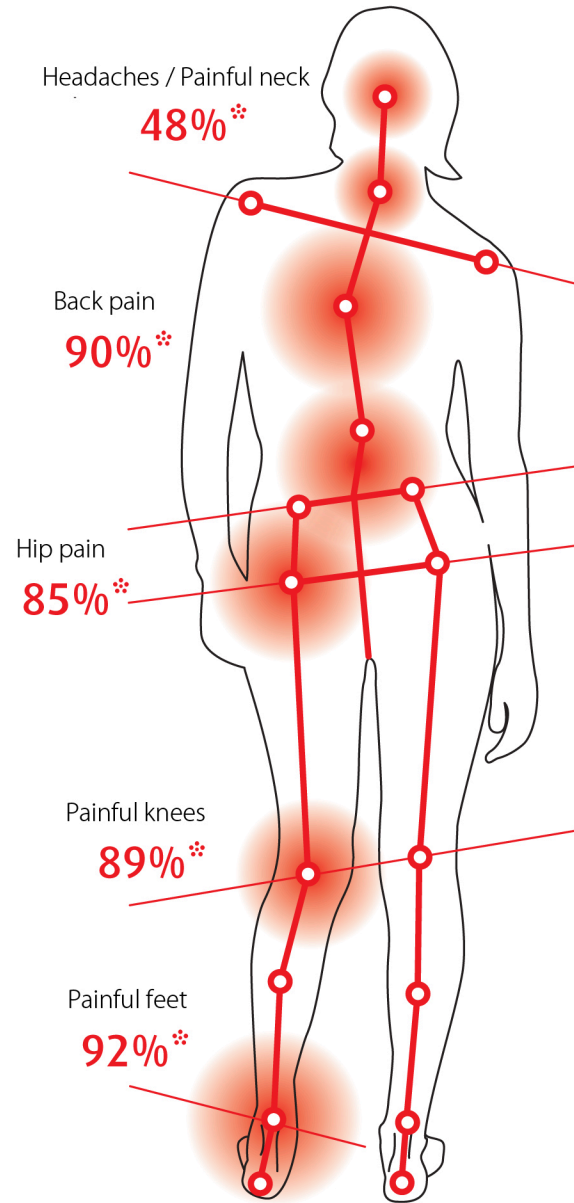

3. correcting central base (damper of carbon derivatives)

4. Comfort material

5. Velvet (intense moisture absorber)

If you are affected by one of these problems...

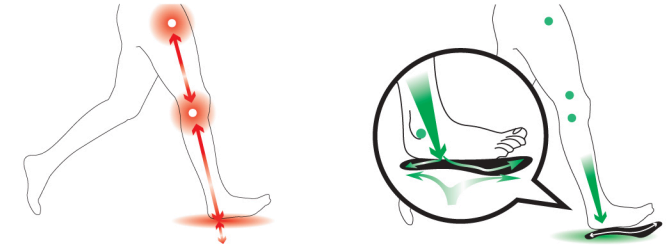

*Relief by area in percentages (data from Kinepod patients).

...so you too should experience the intelligent insole!

The 4 effects that make it REALLY EFFICIENT

1 Damping effect, shock absorber

With its advanced technology, the Kinepod Insole absorbs the shock upon contact of the foot on the ground and returns the stored energy to propel the foot during its lift off from the ground.

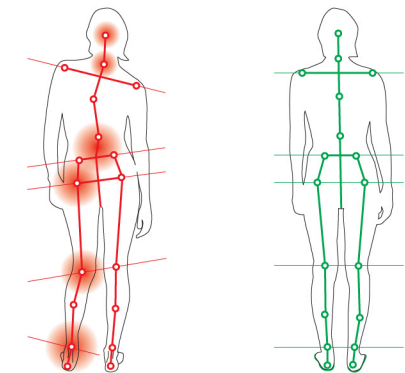

Without insoles
The shock wave goes up through the body

With insoles
The shock is absorbed and the energy is released at the end of step, which leads to an ideal propulsion.

The intelligent insole, the 1st stimulating shock absorber for humans !

2 Postural effect

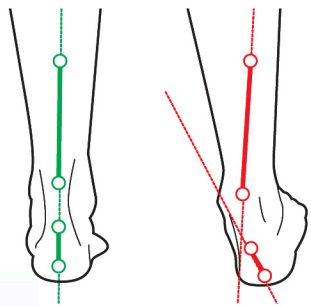

In just a few weeks, the Kinepod insole readjusts the body's base and restores a balanced posture.

Without insoles

With insoles

3 Rehabilitative effect

With insoles

Without insoles

Through its multiple stimulations (muscular and proprioceptive), the Kinepod Insole enables a perfect rehabilitation for your feet.

4 Immediate effects

In a couple of minutes, the insole is able to stimulate the muscular chains of the body, creating an adjusted muscle workout, a perfect motor coordination, a balanced posture and an exceptional proprioceptive workout of the feet.

The intelligent insole : Prevention and relief thanks to its innovative technology

The Kinepod insole is also able to adapt to the evolution of the pathology. It is possible to add or remove reinforcing elements under the active insole.

To obtain the same results on the ankle-foot, combination straps can be added. They will give a new dimension to the insole by providing unique performances. They are particularly effective in sports that require a perfect stability, such as basketball, football, tennis and rugby.

Note that these reinforcing elements and the straps can be adjusted according to a diagnosis or a postural exam done previously by a physician.

Application areas

- **TRAINING**
Joint mobility, flexibility, muscle activity, stability
- **PREVENTION**
Posture, appearance, gait
- **PERFORMANCE**
Sport and fitness, getting back in shape
- **THERAPY**
Muscle, joint, ligament, and tendon injuries

ADJUSTABLE

Headaches? Back pain ?
Hip pain? Knee or foot pain?

- Stimulating
- Rehabilitating
- Therapeutic
- Preventive
